

# Mastering SCCM CB & Modern Windows 10 management with Intune and Azure

**Kent Agerlund** Enterprise Mobility MVP &  
Microsoft Regional Director

Dive deep into System Center Configuration Manager CB & Windows 10 and learn how to integrate SCCM with Microsoft Azure, using services like Cloud Distribution Points, Cloud Management Gateway, Windows Autopilot and co-management with Microsoft Intune.

This course is delivered in English

This 5 day training is no beginner's class.

## Mastering SCCM CB & Modern Windows 10 management with Intune and Azure

Being able to design, deploy, manage and troubleshoot Configuration Manager and Windows 10 in your environment. In the class there will be a high focus on automation and understanding how you can optimize your Windows 10 management using Configuration Manager & Microsoft Azure. The class is always based on the latest available public builds.

Duration:

5 days

Teacher:

Kent Agerlund, Enterprise Mobility MVP & Microsoft Regional Director

Language:

English

Material:

Student Lab Manual, Slide deck, and lab files

Prerequisites and abstract:

Basic understanding of Active Directory, WSUS and SQL. Basic knowledge and working experience with Configuration Manager 2012/Current Branch. We will take you through the advanced design, installation, configuration and troubleshooting of the main features in Configuration Manager based and Windows 10. After class, you will have a solid understanding off the design options, flow of the main features and troubleshooting techniques. Likewise, you will have a solid understanding on how Configuration Manager can be used to secure Windows 10 deployments. The class will also focus on how to integrate Configuration Manager with Microsoft Azure, using services like Cloud Distribution Points, Cloud Management Gateway, Windows Autopilot and co-management with Microsoft Intune.

- Fault tolerance and High availability
- Installing and troubleshooting clients
- Client Health and insight Analytics
- Inventory Management
- Application deployment
- Software updates
- Compliance Settings

- Operating System Deployment
- Microsoft Azure integration with Cloud Management Gateway, Cloud Distribution Points and Azure Active Directory
- Windows 10 modern management using Microsoft Intune and co-management
- Windows 10 security options
- Troubleshooting tools

The course will cover the following modules:

**Day 1:**

Designing Configuration Manager hierarchies

- Recovery options, restore primary sites
- Design fault tolerance and high availability environments
- Working with HTTP and HTTPS site systems
- Working with DMZ/multi domain and workgroup environments
- Configure and optimize SQL
- Intergrating the Cloud Management Gateway to support Internet based users

Troubleshooting tools and techniques

- Understanding log files
- Status Filter Rules
- Introducing WMI
- Using SQL Profiler

Configuration manager client management

- Installing, configuring and troubleshooting clients

**Day 2:**

Content distribution

- Working with content distribution in distributed environments
  - WIN PE Peer caching
  - Peer to Peer technologies
  - Working with the client cache
  - Integrating the Cloud Distribution Point

Deploying Windows 10 with operating system deployment

- Upgrading to Windows 10
- Creating and maintaining reference images
- Customizing the boot images
- Integrating custom frontends
- Deploying images
- Troubleshooting operating system deployment
- Windows 10 Autopilot integration

### **Day 3:**

#### Managing Windows 10 using the MDM agent

- Develop a Windows 10 management strategy
- Understanding the Windows 10 MDM management options
- Manage modern Windows 10 devices

#### Managing Windows 10 security

- Understand and implement the Windows 10 security options

#### Inventory management

- Deep dive into the inventory process

### **Day 4:**

#### Working with Visualizations

- Working with SQL reporting services
- Integrating Microsoft Power BI

#### Application deployment

- Working with the application model
- Troubleshooting application deployments

### **Day 5:**

#### Software Updates

- Creating and designing the software update infrastructure
- Deploying and troubleshooting Microsoft software updates
- Deploying 3rd. party updates

#### Windows Servicing

- Develop a Windows Servicing model

#### Compliance Settings

- Creating and implementing configuration items and baselines
- Remediate non-compliant computers and users
- Troubleshooting compliance settings
