

Is Your Enterprise Monitoring Solution “Cloud-Aware?”

Today's enterprises are integrating dated legacy applications and infrastructure with modern, flexible and scalable cloud solutions. But enterprise IT teams still rely on legacy monitoring applications built for an aging, premise-based and less agile world. And traditional enterprise monitoring solutions' capabilities fall short when it comes to monitoring and integrating real-time performance data from hybrid infrastructure environments. That's where we come in.

GroundWork Monitor Enterprise

GroundWork Monitor Enterprise 8.0 is a powerful monitoring platform for physical, virtual, cloud and hybrid-cloud infrastructures. We monitor anything, anywhere — physical and virtual systems, servers, routers, networks, storage resources, web servers, application servers, cloud systems, containers ... and much more. GroundWork Monitor provides a holistic view of your entire IT landscape, enabling you to deliver higher quality and more proactive service across your enterprise.

Key features include:

Unified Monitoring

- Easy to download and install
- Flexible for customization and scaling
- Integrated open source tools
- On-premise deployment
- Distributed monitoring
- Inventory and asset management
- RESTful API for data input
- Alerting

Continuous Discovery and Automation

- Agentless or agent-based
- Auto discovery

IT Ops Analytics

- Trending and graphing
- SLA management and reporting
- Log analytics
- Business service monitoring
- Automated corrective actions

Let us make your IT GroundWork easier!
